

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A stretched porous resin film which is obtained from a compound prepared by kneading a composition ~~comprising~~ consisting essentially of 30 to 100% by weight of a thermoplastic resin comprising 5 to 100 parts by weight of a hydrophilic thermoplastic resin per 100 parts by weight of a non-hydrophilic thermoplastic resin and 0 to 70% by weight of at least one of an inorganic fine powder and an organic fine powder in an intermeshing twin-screw extruder at a screw shear rate of 300 sec^{-1} or higher and which has a liquid absorbing capacity of 0.5 ml/m^2 or more as measured in accordance with the method specified in Japan TAPPI Standard No. 51-87.

2. (Original) The porous resin film according to claim 1, which has an average contact angle of 110° or less with water.

3. (Original) The porous resin film according to claim 2, wherein the difference between the maximum and the minimum contact angles with water is 30° or less.

4. (Original) The porous resin film according to claim 1, which has a porosity of 10% or more.

5. (Original) The porous resin film according to claim 4, which has 1×10^6 or more pores per m^2 on the surface thereof.
